

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A pointing device ~~including, comprising:~~
a sensor ~~substrate;~~substrate having a first surface and a second surface
opposite the first surface;
a stick member including a base part ~~and being arranged upright on~~ adhered to
the first surface of the sensor substrate; and
a ~~pair~~ plurality of strain sensors for detecting an operating state of the stick member, the strain sensors being provided on the second surface of the sensor substrate at positions where a part of each strain sensor overlaps with a lower surface of the base part of the stick member.
2. (Original) The pointing device according to claim 1 further including trimmable chip resistors each being connected in series with each strain sensor.
3. (Currently Amended) An electronic apparatus ~~including, comprising:~~
a main unit on which a keyboard is mounted;
a display part which is connected with an edge of the main unit so that the display part is opened/closed with respect to the main unit; and
a pointing device for moving a cursor displayed on the display part, the pointing device being arranged in the keyboard of the main unit;
wherein the pointing device includes:
a sensor ~~substrate;~~substrate having a first surface and a second surface
opposite the first surface;
a stick member including a base part ~~and being arranged upright on the~~ is
adhered to the first surface sensor substrate; and

~~a pair~~ a plurality of strain sensors for detecting an operating state of the stick member, the strain sensors being provided on the second surface of the sensor substrate at positions where a part of each strain sensor overlaps with a lower surface of the base part of the stick member.
